Welcome to PAROLIN RACING KART.

Parolin Racing kart was founded in 1986 by Albino Parolin, who combining his experience as a very skilled driver first and as a mechanic later, started at only the age of eighteen, producing bare chassis units for the main Italian and European companies. Very fast as a pilot, placing himself at the first positions in several international races while racing against Michael Schumacher or Mika Hakkinen, he has been getting faster ever since gaining more and more popularity all over the world as the youngest and major manufacturer.

Successfully moving forward, it looked out for its own product making the first full range of chassis: **PAROLIN**. Under the yellow and black colors, brilliant results and victories enabled the chassis to be increasingly recognized, posing it as a promise to the racing scene.

In 1998 in "absolute secrecy ", the company worked out a new brand, **KGB**, which soon developed a so extended network of "agents" as to be present in most of the countries of the world.

Combining Albino Parolin's extensive experience and his passion for racing, a third brand of chassis entered the scene, **DC ONE**. Hamilton and Rosberg , as well as several other International Champions, put the kart through test procedures certifying its performance and proving it as a leading brand.

As karting is also fun and excitement, Parolin Racing Kart dedicated enormous care and resources to new research in the rental kart field, developing the most reliable and highest quality chassis for indoor and outdoor as the **Indoor Maxter**, the Mini indoor and the new **XT-40** chassis.

A team of technical experts, constantly involved in new research and developments, designing innovative, high quality kart products, is also available for any customer need. Whether he require a technical drawing or want to fully develop a **personalized chassis** project or **acesories**, we have the knowledge and the means to carry it out. Ideas turn into virtual solid models through simulation software. Structural, mechanical and dynamical studies are carried out until a final configuration is selected and a production, by the means of CNC vertical machines, lathes, CNC bending machines and the most high-tech equipment, is realized.

After a sensational 2004 karting season, **Parolin Motorsport** is going to manage a winning **Team 2005** attending all the most important international events and covering races in all categories.

Parolin Racing Kart has an extensive tradition, rich of victories either at the track or at the market, and has become over the years one of the biggest manufacturing companies of the kart industry.
